Introduction to CSS Box Model: Part - 2

Adding Background Image
to the Background Container

Border
Padding

Styling a Button
Adding Spaces

Agenda

What we are going to achieve

7143

Backgrounds

Adding Background Image to a Container

HTML

```
<body>
  <div class="bg-container">
  </div>
</body>
```

CSS

```
.bg-container {
  background-image: url("Image URL");
  height: 100vh;
  background-size: cover;
}
```

Adding Background Color to the Card

Adding Background Color to the Card

```
<body>
  <div class="bg-container">
    <div class="card">
      <h1> Tourism </h1>
      <p> Plan your trip. </p>
      <button> Get Started </button>
    </div>
  </div>
</body>
```

```
.card {
  text-align: center;
  background-color: white;
}
```

Styling a Button

Get Started

Get Started

Adding Height & Width to the Button

HTML

```
<button class="button">  
  Get Started  
</button>
```

CSS

```
.button {  
  height: 36px;  
  width: 138px;  
}
```

Let's Add Background Color to the Button

Color Name

orange

red

blue

green

CSS

Colors

How you will name these **colors**?

CSS

Colors

Color can be represented in multiple ways

- **Color names**
- **Hex Code**
- HSL
- RGB

many more...

Color Representation

Hex Code

CSS

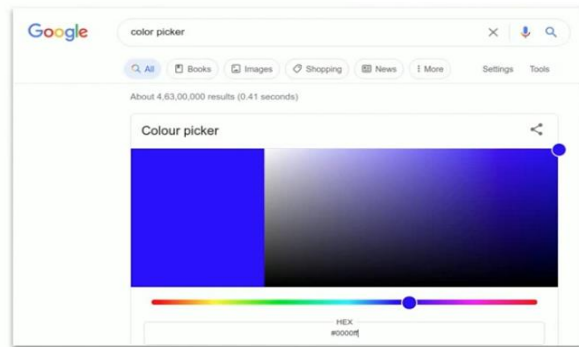

```
.button {  
  background-color: #25b1cc;  
}
```

Pick a Color using Hex Code

You can choose among

16,777,216

Colors
Using Hex Codes

- The Hex Code for the color **blue** is **#0000ff**

Colors

Values

Color Name Hex Code

orange	#ffa500	
red	#ff0000	
blue	#0000ff	
green	#008000	
	#012d36	
	#25b1cc	

377442

Button Styles

Adding Color to the Button Text

CSS

```
.button {  
  height: 36px;  
  width: 138px;  
  background-color: #25b1cc;  
  color: white;  
}
```

How Can We Get Rounded Corners for the Button?

CSS Box Model Properties

Each rectangular box has different properties:

- height
- width
- margin
- **border**
- padding

CSS Box Model Border Properties

Box Model Border related Properties

- **border-radius**
- border-width
- border-style
- border-color

Border

Border Radius

Get Started

`border-radius: 5px;`

Get Started

`border-radius: 12px;`

Get Started

`border-radius: 25px;`

Button Styles

Adding Border Radius

CSS

```
.button {  
  height: 36px;  
  width: 138px;  
  background-color: #25b1cc;  
  color: white;  
  border-radius: 20px;  
}
```

Get Started

Get Started

Button Styles

Adding Border Radius

CSS

```
.button {  
  height: 36px;  
  width: 138px;  
  background-color: #25b1cc;  
  color: white;  
  border-radius: 20px;  
}
```

Get Started

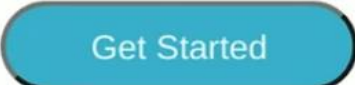

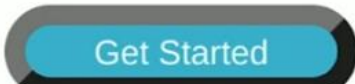

Get Started

How to Achieve the Button without a Border?

Border

Border Width

	<code>border-width: 0px;</code>
	<code>border-width: 2px;</code>
	<code>border-width: 4px;</code>
	<code>border-width: 6px;</code>

Button Styles

Removing Border from the Button

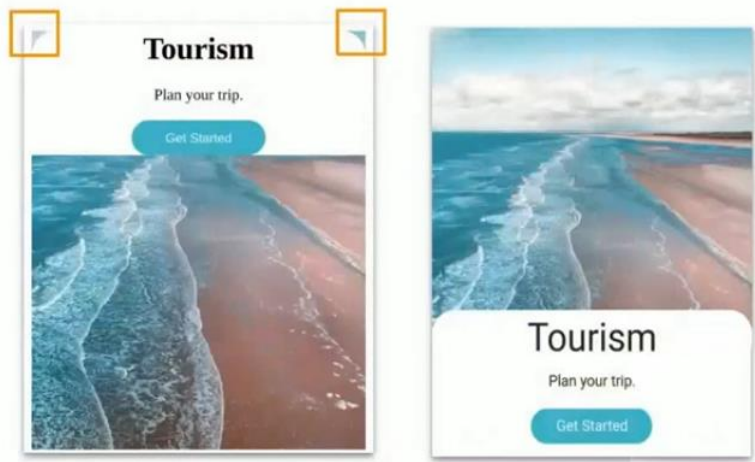

```
.button {  
  height: 36px;  
  width: 138px;  
  background-color: #25b1cc;  
  color: white;  
  border-radius: 20px;  
  border-width: 0px;  
}
```

CSS

By default, HTML Buttons come with borders in the browsers

How to get Rounded Corners for the Card?

Border

Border Radius to Corners

`border-top-left-radius: 25px;`

`border-top-right-radius: 25px;`

`border-bottom-left-radius: 25px;`

`border-bottom-right-radius: 25px;`

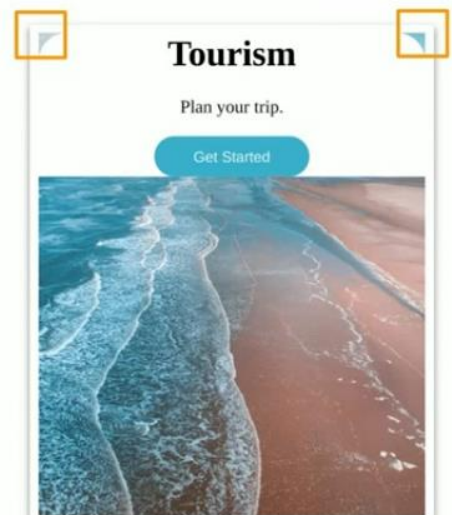

47

Card Styles

Getting Rounded Corners for the Card

```
.card {  
  text-align: center;  
  background-color: white;  
  border-top-left-radius: 25px;  
  border-top-right-radius: 25px;  
}
```

CSS

Padding

We can get spacing around element's content by using CSS Box Model **padding** property

Card Styles

Applying Padding to Card

```
.card {  
  text-align: center;  
  background-color: white;  
  padding: 5px;  
}
```

CSS

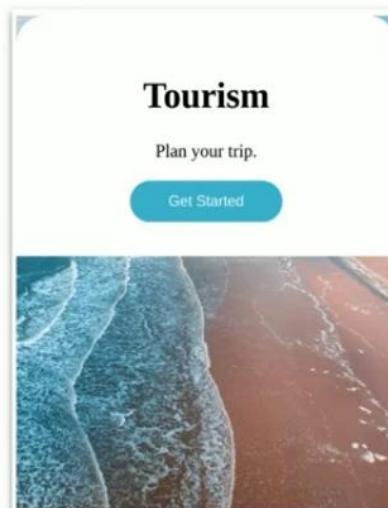

CSS Box Properties

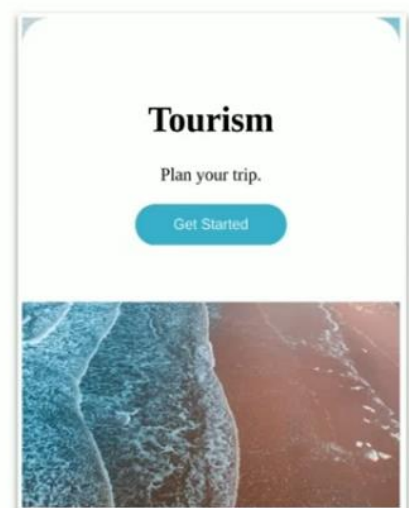

Padding

`padding: 5px;`

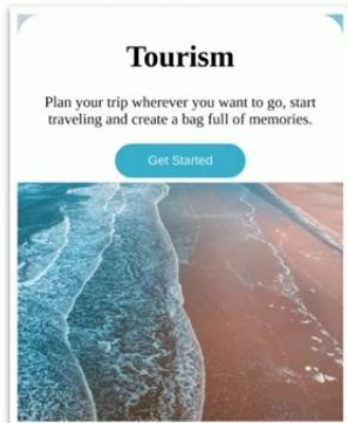

`padding: 30px;`

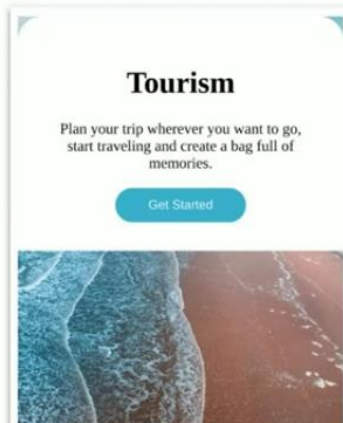

`padding: 50px;`

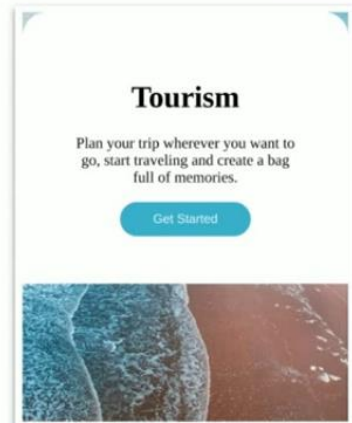

Padding

`padding: 5px;`

`padding: 30px;`

`padding: 50px;`

Card Styles

Applying Padding to Card

Key Takeaways

- Box Properties
 - Border
 - border-width
 - border-radius
 - Padding
- Color Representation
- Styling a Button
- Styling a Card

HTML Code:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Document</title>

  <link rel="stylesheet" href="./class5.css">

</head>

<body>

  <div class="bg-container">

    <div class="card">

      <h1>Tourism</h1>

      <!--<p>plan to trip</p>-->

      <p>plan your trip where you want to go, start travelling and

        create a bag full of memories.</p>

      <button class="button">Get Started</button>

    </div>

  </div>

</body>

</html>
```

CSS Code:

```
@import
url('https://fonts.googleapis.com/css2?family=Bree+Serif&family=Caveat:wght@400;
700&family=Lobster&family=Monoton&family=Open+Sans:ital,wght@0,400;0,700;1,
400;1,700&family=Playfair+Display+SC:ital,wght@0,400;0,700;1,700&family=Playfair
```

```
+Display:ital,wght@0,400;0,700;1,700&family=Roboto:ital,wght@0,400;0,700;1,400;1,700&family=Source+Sans+Pro:ital,wght@0,400;0,700;1,700&family=Work+Sans:ital,wght@0,400;0,700;1,700&display=swap');
```

```
.bg-container
```

```
{
```

```
Backgroundimage:url("https://encryptedtbn0.gstatic.com/images?q=tbn:ANd9GcQqCLv_aafvkWQo91m9wQDxTY2-fd9Mx2qz5g&s");
```

```
height: 85vh;
```

```
width: 50vw;
```

```
background-size: cover;
```

```
}
```

```
.card
```

```
{
```

```
background-color: white;
```

```
text-align: center;
```

```
border-top-left-radius:25px ;
```

```
border-top-right-radius:25px ;
```

```
padding: 50px;
```

```
}
```

```
.button
```

```
{
```

```
height: 36px;
```

```
width: 136px;
```

```
/*background-color: blue;*/
```

```
background-color: #25b1cc;
```

```
color: white;
```

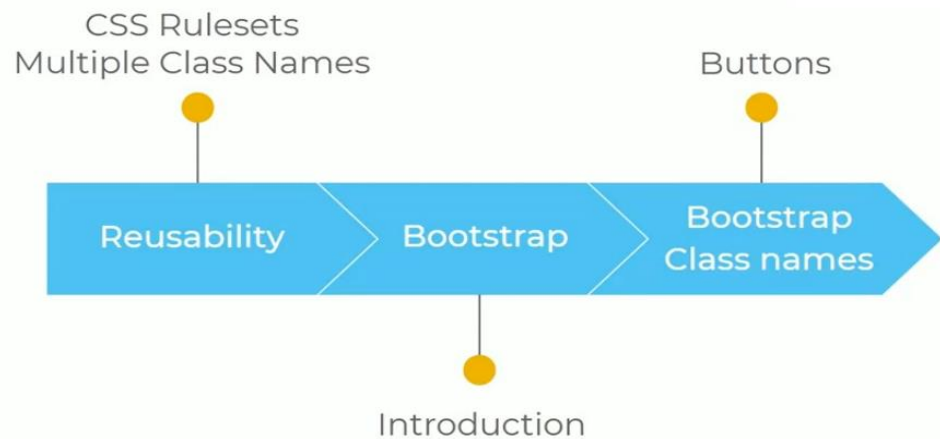

```
font-weight: bold;
```

```
border-radius: 25px;
```

```
border-width: 0px;
```

```
}
```

Introduction to Bootstrap

Reusability

Reusing the CSS Ruleset

HTML

```
<button class="button">
  Get Started
</button>
<button class="button">
  Visit Now
</button>
```

CSS

```
.button {
  height: 36px;
  width: 138px;
  border-width: 0px;
  border-radius: 10px;
}
```

Syntax

Providing Multiple Names to the Class Attribute Value

We can provide **multiple names** to the Class Attribute value

`<tag class="name1 name2 name3 name4 ...">`
Attribute Value

In general, we call these names as **class names**

Providing Multiple Names to the Class Attribute Value

Example

HTML

```
<button class="button button-green">  
  Get Started  
</button>
```

Get Started

CSS

```
.button {  
  height: 36px;  
  width: 138px;  
  border-width: 0px;  
  border-radius: 10px;  
}  
.button-green {  
  background-color: #8cc63f;  
}
```

Providing Multiple Names to the Class Attribute value

HTML

```
<button class="button button-green">
  Get Started
</button>
<button class="button button-orange">
  Visit Now
</button>
```

CSS

```
.button-green {
  background-color: #8cc63f;
}

.button-orange {
  background-color: #f7931e;
}
```
