Bootstrap

## Five Responsive Tiers

To make websites responsive ,  
Bootstrap categorises devices into  
**Five Responsive Tiers**

These are known as **Responsive Breakpoints**

Device	Device Size(width)
Extra small devices	< 576px
Small devices	>= 576px
Medium devices	>= 768px
Large devices	>= 992px
Extra large devices	>= 1200px

Bootstrap Grid System

## How it works

Bootstrap Grid system is  
made up of 3 things:

- Container
- Rows
- Columns

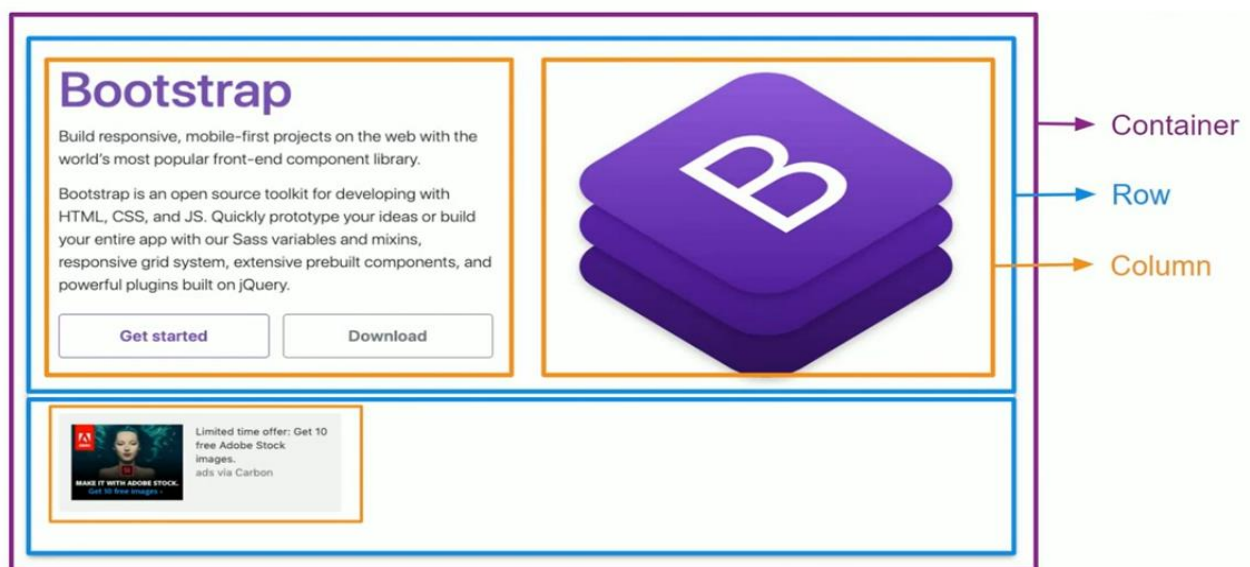

## How it works

A **Container** consists of Rows and Columns

All the **Content** should be placed inside these Columns

## How it works

## Bootstrap Grid System

Bootstrap Grid System uses **12 column system** for layouting.

We can create up to **12 columns** across the page.

## Different Column Systems

4 Column System

8 Column System

12 Column System

### Bootstrap Grid System

## 12 Column System

## Bootstrap

Build responsive, mobile-first projects on the web with the world's most popular front-end component library.

Bootstrap is an open source toolkit for developing with HTML, CSS, and JS. Quickly prototype your ideas or build your entire app with our Sass variables and mixins, responsive grid system, extensive prebuilt components, and powerful plugins built on jQuery.

## Columns Representation

## Columns Representation

## Specifying number of Columns

We can specify number of columns our content should occupy in any device

The number of columns we specify should be **any number** in range of 1 to 12

# How to Create a Layout Using Bootstrap Grid System?

Bootstrap Grid System

## Container

A **Container** is a div Element with a classname **container**

The purpose of the Container is to **hold** Rows and Columns

```
<div class="container">
  ...
</div>
```

Bootstrap Grid System

## Row

A **Row** is a div Element with a classname **row**

The purpose of Row is to **wrap** all the Columns

```
<div class="container">
  <div class="row">
    ...
  </div>
</div>
```

Bootstrap Grid System

## Column

A **Column** is a div Element with a classname **col-\***

We place all our **content** inside this Column

```
<div class="container">
  <div class="row">
    <div class="col-12">
      I'm your content inside the grid!
    </div>
  </div>
</div>
```

# Creating Multiple Column Layouts

Bootstrap Grid System

## One Column Layout

```
<div class="container">
  <div class="row">
    <div class="col-12">
      <h1 class="heading">Taj Mahal</h1>
      <p>
        The Taj Mahal is an ivory-white...
      </p>
    </div>
  </div>
</div>
```

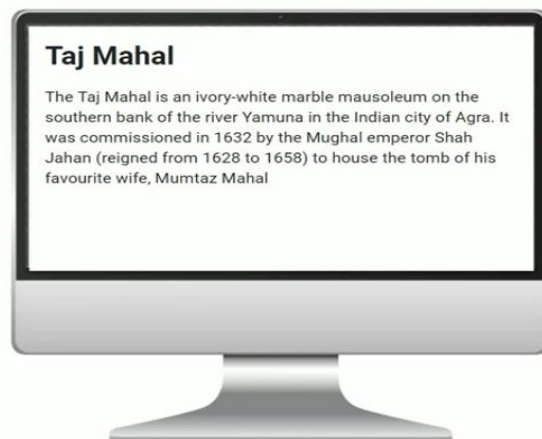

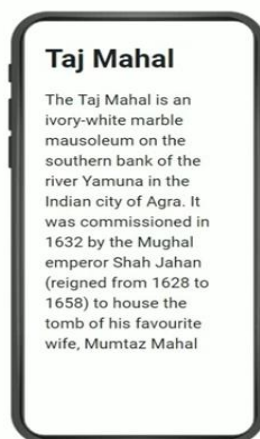

HTML

```
.heading{
  font-size: 24px;
  font-weight: bold;
}
```

CSS

Output in different Devices

## One Column Layout

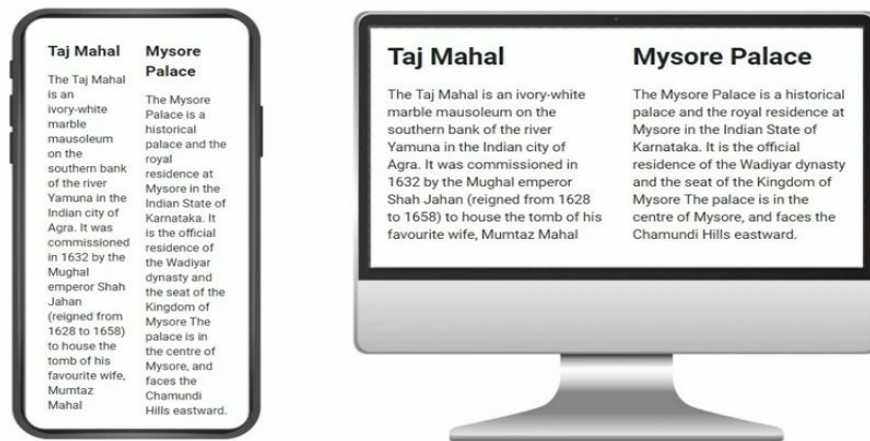

Bootstrap Grid System

## Two Column Layout

```
<div class="container">
  <div class="row">
    <div class="col-6">
      ...
    </div>
    <div class="col-6">
      ...
    </div>
  </div>
</div>
```

HTML

## Two Column Layout

377143

## Bootstrap Grid System

## Three Column Layout

HTML

```
<div class="container">
  <div class="row">
    <div class="col-4">...</div>
    <div class="col-4">...</div>
    <div class="col-4">...</div>
  </div>
</div>
```

Three Column Layout

## Output

Taj Mahal	Mysore Palace	Golden Temple
The Taj Mahal is an ivory-white marble mausoleum on the southern bank of the river Yamuna in the Indian city of Agra. It was commissioned in 1632 by the Mughal emperor Shah Jahan (reigned from 1628 to 1658) to house the tomb of his favourite wife, Mumtaz Mahal	The Mysore Palace is a historical palace and the royal residence at Mysore in the Indian State of Karnataka. It is the official residence of the Wadiyar dynasty and the seat of the Kingdom of Mysore. The palace is in the centre of Mysore, and faces the Chamundi Hills eastward.	The Mysore Palace is a historical palace and the royal residence at Mysore in the Indian State of Karnataka. It is the official residence of the Wadiyar dynasty and the seat of the Kingdom of Mysore. The palace is in the centre of Mysore, and faces the Chamundi Hills eastward.

# Bootstrap Grid System

## Agenda

## Bootstrap Grid System

Bootstrap Grid System  
What is RWD?

Using Breakpoints in Combination  
Class Name Prefixes

Responsive Web Design

## What is Responsive Web Design?

An approach to make web pages give best user experience in all the devices

How it works

## Bootstrap Grid System

Bootstrap Grid system is made up of 3 things:

- Container
- Rows
- Columns

## How it works

A **Container** consists of Rows and Columns

All the **Content** should be placed inside these Columns

### Bootstrap

## Five Responsive Tiers

To make websites responsive, Bootstrap categorises devices into **Five Responsive Tiers**

These are known as **Responsive Breakpoints**

Device	Device Size(width)
Extra small devices	< 576px
Small devices	>= 576px
Medium devices	>= 768px
Large devices	>= 992px
Extra large devices	>= 1200px

### Bootstrap

## Grid System

Bootstrap Grid System uses **12 column system** for layouting

We can create up to **12 columns** across the page.

## 12 Column System

12 Grid Columns

2 Bootstrap  
Grid Columns

Let's add the

## Fourth Bootstrap Grid Column

## Adding Bootstrap Grid Column

HTML

```
<div class="container">
  <div class="row">
    <div class="col-6">...</div>
    <div class="col-6">...</div>
    <div class="col-6">...</div>
    <div class="col-6">
      <h1 class="heading">Varanasi</h1>
      <p>Varanasi also known as ...</p>
    </div>
  </div>
</div>
```

## Output

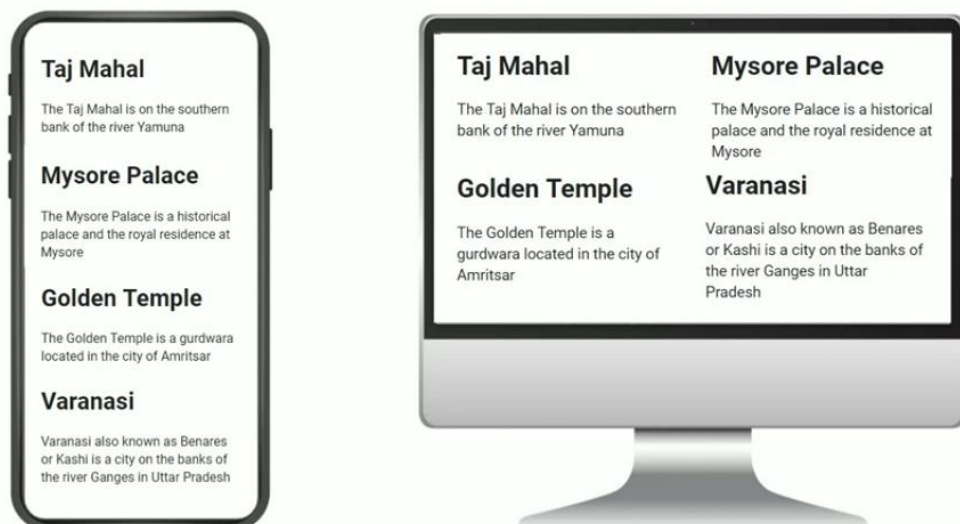

## How to Achieve Different Layouts in Different Responsive Breakpoints?

Responsive Breakpoints

## Layout in Different Breakpoints

## Responsive Breakpoints

Bootstrap provides different column **class name prefixes** for Five Responsive Tiers (Responsive Breakpoints)

Device	Device Size(width)	Class Name Prefix
Extra small devices	< 576px	col-
Small devices	>= 576px	col-sm-
Medium devices	>= 768px	col-md-
Large devices	>= 992px	col-lg-
Extra large devices	>= 1200px	col-xl-

## Responsive Breakpoints

If we define the behaviour of the column in a particular device, a similar behaviour is guaranteed in all devices with **larger sizes**

Device	Device Size(width)	Class Name Prefix
Extra small devices	< 576px	col-
Small devices	>= 576px	col-sm-
Medium devices	>= 768px	col-md-
Large devices	>= 992px	col-lg-
Extra large devices	>= 1200px	col-xl-

## Responsive Breakpoints

A column with class name **col-6** will behave similarly in all the devices with larger sizes

HTML

```
<div class="container">
  <div class="row">
    <div class="col-6">
      The Taj Mahal is on the ...
    </div>
  </div>
</div>
```

# Let's achieve this Responsive Layout

Responsive Breakpoints

## Using Class Names in Combination

Use a **combination** of different class names for Breakpoints

Device	Class Name Prefix
Extra small devices	col-
Small devices	col-sm-
Medium devices	col-md-
Large devices	col-lg-
Extra large devices	col-xl-

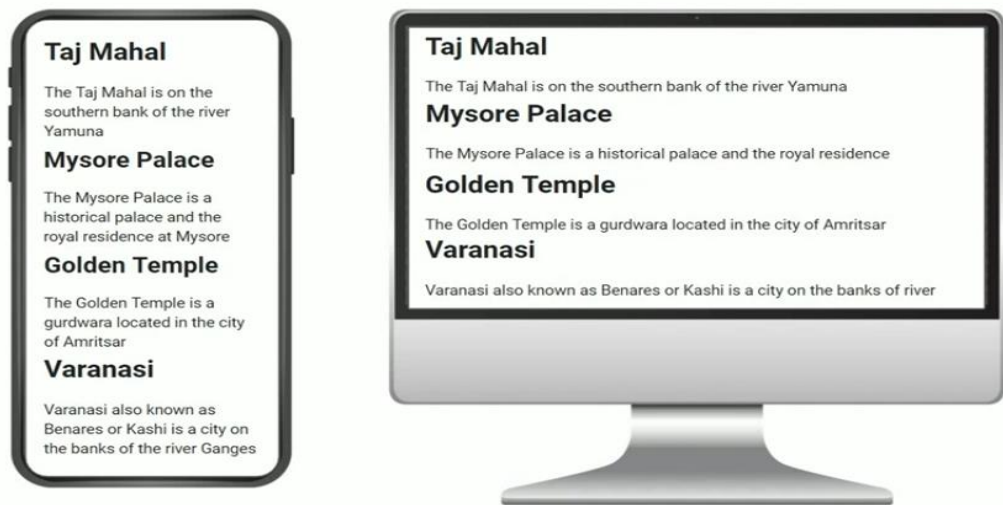

Responsive Breakpoints

## Extra Small and Larger Devices

HTML

```
<div class="container">
  <div class="row">
    <div class="col-12">...</div>
    <div class="col-12">...</div>
    <div class="col-12">...</div>
    <div class="col-12">...</div>
  </div>
</div>
```

## Output

## Bootstrap

## Mobile First Approach

Bootstrap follows

### Mobile First Approach

First design the layout of **mobile version**

This will be adopted by devices with larger sizes

# Key Takeaways

- Responsive Web Design
- Bootstrap Grid System
  - Five Responsive Tiers
  - Container
  - Row
  - Column
- 12 Column System

# Key Takeaways

- Column Wrapping
- Bootstrap Responsive Breakpoints
  - Class name prefixes for different Breakpoints
  - Using class name prefixes in combination
